# Minimum Legal Size (MLS) of capture to avoid growth overfishing of commercially exploited fish and shellfish species of Kerala

Sunil Mohamed, K., Zacharia, P. U., Maheswarudu, G., Sathianandan, T. V., Abdussamad, E. M., Ganga, U., Lakshmi Pillai, S., Sobhana, K. S., Rekha J. Nair, Josileen Jose, Rekha D. Chakraborty, Kizhakudan, S. and Najmudeen, T. M.

Central Marine Fisheries Research Institute, Kochi

## **Background**

During the current fishing season, considerable amount of juveniles of small pelagics have been captured along Kerala coast in a targeted manner to meet the demand of fish meal plants. Exploitation of juvenile fish results in considerable economic loss, in terms of what could have been obtained had the fishers waited for a few months and allowed the animal to grow in size and weight. This phenomenon called as growth over-fishing also causes serious damage to the fish stock in terms of long-term sustainability of the resources. A minimum legal size (MLS) is seen as a fisheries management tool with the ability to protect juvenile fish, maintain spawning stocks and control the sizes of fish caught. The MLS sets the smallest size at which a particular species can be legally retained if caught. MLS could be used to protect immature fish ensuring that enough fish survive to grow and spawn, control the numbers and sizes of fish landed, maximize marketing and economic benefits and promote the aesthetic values of fish.

Setting a MLS and implementing the same would increase the economic efficiency of the fishery besides affording protection to juveniles and allowing them to grow in weight and length. Because of the relative fast growth rates in tropical species (as in Kerala), higher weights can be reached very quickly within a few months resulting in higher harvest biomass, and therefore, higher incomes to fishers.

#### Objective

- To prevent growth overfishing by prescribing MLS for major commercially exploited marine fish stocks of Kerala State.
- Maintain healthy stock of marine fishes off the coast of Kerala.
- Ensure better incomes to marine fishers of Kerala on a sustainable basis.

### Treatment

Analyses were carried out with maturity data collected by scientists of capture fisheries divisions of CMFRI. SFM (size at first maturity or size at which

### **Decision Logic**

CRITERIA	EXPLANATION	LOGIC
SSD	Size at sexual differentiation into male and female	This metric can be used to prevent juvenile exploitation and growth overfishing in those stocks which are very abundant, have high reproductive potential and whose biomasses are not affected by high fishing pressure.
MSM	Minimum size at maturity or size of smallest mature fish	This metric can be used to prevent growth overfishing in stocks which are moderately resilient to fishing pressure.
SFM	Size at first maturity or size at which 50% of the fishes are mature	Conventionally used as a metric to prevent growth overfishing completely and recruitment overfishing partially. Can be used in situations where the stock is depleted or rebuilding.
SCM	Size at complete maturity or size at which 100% of the fish are mature	Can be used to prevent recruitment overfishing by capping the maximum legal size of capture. Seasonally applicable to fishes which grow to large size and exhibit slow growth rates.

50% of fish are mature) and MSM (minimum size at maturity or size of the smallest mature fish) were determined by logistic curve method. Only female fishes have been considered in this analysis, as males mature at earlier sizes and are reproductively more active.

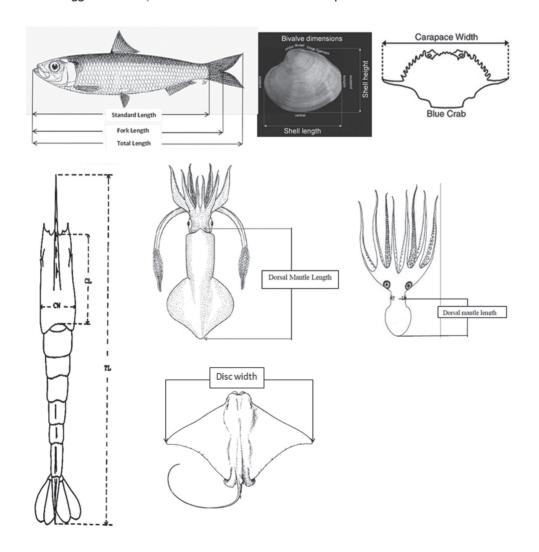

### Net & Mesh Sizes

Exploitation of juveniles of all fishes can be reduced to a very large extent by strictly implementing the optimum net size and mesh size for different gears as prescribed in the recent Trawl Ban Committee Report (2014) already submitted to the DOF-GOK.

#### Recommendation

1. The CMFRI recommends to the DOF-GOK to implement the suggested MLS (for 58 commercial

- species) either by promulgating an ordinance or by amending the KMFRA, the former as an immediate measure and the latter as a more permanent measure.
- 2. The earlier advisory by CMFRI (Pillai *et al.*, 2009) may be considered as revised.
- 3. For determining violations of the MLS, the DOF is advised to take a random species-wise subsample of the catch (about 25-50 numbers), take appropriate measurements, and consider the catch as a violation if more than 50% of the catch sample is composed of fishes at or below the prescribed MLS.
- 4. Inspections may preferably be carried out at sea or in the landing centre using an unsorted sample.

# Recommended MLS for major marine fish stocks of Kerala State to be implemented by the DOF-GOK

No	Species Name	Common Name	Vernacular Name	Recommended MLS (cm) (g*)	Decision Logic	Remarks
Major	Pelagic Fish Stocks					
1	Sardinella longiceps	Oil sardine	Mathi/ Nei-chala	10 TL	SSD (length of transition from juvenile to adult). MSM is 13 cm	This is a small pelagic having high abundance in the ecosystem. Recruitment is subject to environmental changes and stock is capable of withstanding high fishing pressure. Juvenile fish shoals can be voluntarily avoided by fishers
2	Rastrelliger kanagurta	Indian mackerel	Aiyala	14 TL	MSM	This is also a small pelagic, but its abundance is not as high as oil sardine, and therefore needs a more conservative protection measure like MSM.
3	Euthynnus affinis	Little tuna	Choora	31FL	MSM	
4	Auxis thazard	Frigate tuna	Urulan choora / Kudutha	25 FL	MSM	
5	Katsuwonus pelamis	Skipjack tuna	Varayan Choora	35 FL	MSM	
6	Thunnus albacares	Yellowfin tuna	Kera	50 FL	MSM	
7	Auxis rochei	Bullet tuna	Eli choora	18 FL	MSM	
8	Sarda orientalis	Bonito	Neimeen choora	35 FL	MSM	
9	Thunnus tonggol	Longtail tuna	Kera choora	44 FL	MSM	
10	Gymnosarda unicolor	Dogtooth tuna	Pallan choora	50 FL	MSM	
11	Scomberomorus commerson	King seer	Neimeen/ Aiykora	50 FL	MSM	
12	Scomberomorus guttatus	Spotted seer	Seela neimeen	37 FL	SFM	The more conservative SFM is applied due to the fact that the stocks are in declining status
13	Rachycentron canadum	King fish	Motha	61 FL	SFM	
14	Coryphaena hippurus	Dolphin fish	Cycle chain, Pulli motha	38 FL	MSM	
15	Trichiurus lepturus	Ribbon fish	Pambada	46 TL	SSD	
16	Megalaspis cordyla	Horse mackerel	Vangada	19 TL	SSD	
17	Selar					
	crumenophthalmus	Big-eye scad	Aiyilakanni	16 TL	MSM	
18	Decapturus russelli	Indian scad	Thiriyan Chamban	11 TL	MSM	
-	Demersal Fish Stocks					
19	Cynoglossus macrostomus	Malabar sole	Manthal Nangu	9 TL	MSM	
20	Nemipterus japonicus	Threadfin bream (yellow)	Kilimeen Puthiyappla kora	12 TL	MSM	
21	Nemipterus randalli	Threadfin bream (red)	Kilimeen Puthiyappla kora	10 TL	MSM	
22	Lactarius lactarius	White fish	Parava/ Adavu	10 TL	MSM	
23	Saurida tumbil	Greater Lizard fish	Arana meen	17 TL	MSM	
24	Saurida undosquamis	Lizard fish	Arana meen	10 TL	MSM	
25	Pampus argenteus	Silver pomfret	Vella avoli	13 TL	MSM	

26	Parastromateus niger	Black pomfret	Karutha avoli/ Machan	17 TL	MSM	
27	Priacanthus hamrur	Bull's eye	Udupu oori/ kalava kuttan	14 TL	MSM	
28	Otolithes ruber	Tiger toothed croaker	Kora	17 TL	MSM	
29	Otolithes cuvieri	Lesser tiger toothed croaker	Palli kora	16 TL	MSM	
30	Johnius sina	Sin croaker	Mutti kora	11 TL	MSM	
31	Johnius carutta	Karut croaker	Kuttan kora	15 TL	MSM	
32	Johnius belangerii	Belanger's croaker	Kora	14 TL	MSM	
33	Johnius glaucus	Pale spotfin croaker	Kuttan kora	15 TL	MSM	
34	Nibea maculata	Blotched croaker	Korukka	14 TL	MSM	
35	Pennahia anea	Bigeye croaker	Kora	13 TL	MSM	
36	Epinephelus diacanthus	Spiny cheek	Kalava grouper	18 TL	MSM	
37	Himantura imbricata	Scaly whipray	Mookan thirandi	14 DW	MSM	
38	Himantura jenkinsii	Pointed nose sting ray	Thirandi	61 DW	MSM	
39	Gymnura poecilura	Long-tailed				
40	Rhizoprionodon	butterfly ray Grey sharp	Perum thirandi	29 DW	MSM	
	oligolinx	nose shark	Pal sravu	53 TL	MSM	
-	Crustacean Stocks					
41	Charybdis feriatus	Crucifix crab	Kurishu njandu	5 CW	MSM	Berried (with egg) female crabs are easily identifiable by fishermen and they should be encouraged to release such crabs back into the sea
42	Portunus sanguinolentus	Spotted crab	Kavalan njandu	7 CW	MSM	
43	Portunus pelagicus	Blue crab	Kavalan njandu	9 CW	MSM	
44	Metapenaeus dobsoni	Flower tail prawn	Poovalan chemmeen	6 TL	MSM	
45	Parapenaeopsis stylifera	Kiddi prawn	Karikadi chemmeen	7 TL	MSM	
46	Metapenaeus monoceros	Speckled prawn	Choodan chemmeen	11 TL	SFM	This species is depleted and needs additional protection, and therefore, the SFM is used as a conservative measure.
47	Metapenaeus affinis	Jinga prawn	Kazhanthan chemmeen	9 TL	MSM	
48	Plesionika quasigrandis	Oriental narwhal shrimp	Deep sea pullan	8 TL	SFM	Both these are deep sea shrimps have low regeneration capacities and hence as a conservative measure SFM is used as the metric to decide the MLS.
49	Aristeus alcocki	Arabian red shrimp	Red ring	13 TL	SFM	
50	Panulirus homarus	Scalloped spiny lobster	Kadal konchu	200 g	WFM	Notified as MLS for export by MPEDA

51	Panulirus polyphagus	Mud spiny lobster	Kadal konchu	300 g	WFM			
52	Panulirus ornatus	Ornate spiny lobster	Kadal konchu	500 g	WFM			
53	Thenus unimaculatus (=T. orientalis)	Sand lobster	Adippan	150 g	WFM			
Major	Major Molluscan Stocks							
54	Uroteuthis photololigo duvauceli	Indian squid	Koonthal Olakanava	8 DML	MSM			
55	Sepia pharaonis	Pharaoh cuttlefish	Kallan kanava	11 DML	MSM			
56	Amphioctopus neglectus	Ocellate octopus	Neerali Kinavalli	5 DML	MSM			
57	Paphia malabarica	Short-neck clam	Kalli kakka	2 APM	SFM			
58	Villorita cyprinoides	Black clam	Karutha kakka	2 APM	SFM			

#### Abbreviations

- TL Total Length
- FL Fork Length
- SL Standard Length
- CW Carapace width of crabs
- DW Disc width of rays
- DML Dorsal Mantle Length in the case of cephalopods
- APM Anterior Posterior Measurement or length of bivalves
- SFM Size at first maturity or the size at which 50% of the fishes are mature
- WFM Weight at first maturity or the weight of the animal where 50% of the fishes are mature
- MSM Minimum size at maturity or the size of the smallest mature fish
