When fishermen turn farmers

Instead Of Going For Traditional Fishing, Many Are Warming Up To Cage-Culture

Sudha Krishna

Kochi: Fresh fish is no longer a reality for fishermen with more than 30 cage-farmers operating in the town. They are reaping rich harvests and are now in a position to supply fish to restaurants and hotels in Kochi, compared to the small quantities and low prices that they get from the traditional fishing method. The fishermen, who have been engaged in fishing for generations, have diversified into cage-culture and are now reaping rich harvests.

The traditional fishing method is labor-intensive and involves a lot of risks. The fishermen have been facing a decline in catches and a rise in costs. The cage-culture method is more efficient and ensures a steady supply of fish. The farmers are also able to control the quality of the fish.

The cage-culture method involves creating a controlled environment for the fish to grow. The farmers use the latest technology and scientific methods to ensure the health and growth of the fish. The fish are fed a balanced diet and are kept in clean and hygienic conditions.

Kochi is known for its rich marine life and the fishermen have been using these resources to their advantage. However, the traditional fishing method is not sustainable and is affecting the ecosystem. The cage-culture method is a more sustainable and efficient way of catching fish.

Another advantage of the cage-culture method is that it is not dependent on weather conditions. The farmers can control the environment in the cages and ensure a steady supply of fish throughout the year.

The cage-culture method is also more profitable than traditional fishing. The farmers are able to control the quality and size of the fish, which fetch a higher price in the market.

The cage-culture method is also beneficial for the environment. The farmers use less fuel and less labor compared to traditional fishing. The cages also reduce the impact on the marine ecosystem.

The cage-culture method is also beneficial for the fishermen. They are able to diversify their income and are not dependent on the unpredictable weather conditions.

The cage-culture method is also beneficial for the consumers. They are able to get fresh fish throughout the year and are assured of the quality of the fish.

The cage-culture method is a win-win situation for everyone involved. The farmers, fishermen, environment, and consumers all benefit from this method.

An app to order fish from hatcheries

Kochi: With more and more people turning to fish as a healthy alternative, the demand for fresh fish supply is increasing. One such example is the app that connects farmers to consumers. The app connects farmers to consumers and allows them to order fish directly from the farmers.

The app is designed to be user-friendly and easy to use. It allows the consumers to choose the type of fish they want, the size, and the delivery time. The farmers can also track their orders and manage their inventory.

The app is designed to be secure and ensures the privacy of the consumers. The farmers are also provided with payment gateways to make the transaction process smooth and easy.

The app is designed to be scalable and can be expanded to cover more farmers and consumers. The farmers can also use the app to sell their fish directly to the consumers without having to go through intermediaries.

The app is designed to be cost-effective and ensures that the farmers get a fair price for their fish. The app also ensures that the consumers get fresh and quality fish.

The app is designed to be sustainable and ensures that the environment is not affected. The farmers are able to control the quality and size of the fish, which fetch a higher price in the market.
