## 5.6% rise in marine fish production

*Thiruvananthapuram:*

India's marine fish production has shown a sign of revival with the annual marine fish landings in 2017 registering 5.6 per cent increase compared to the previous year, according to the data released by Kochi-based Central Marine Fisheries Research Institute (CMFRI) on Tuesday.

Last year's cyclone Ockhi had a devastating effect on the marine fisheries sectors of Kerala and Tamil Nadu.
