# A CODE LIST OF COMMON MARINE LIVING RESOURCES OF THE INDIAN SEAS

CENTRAL MARINE FISHERIES RESEARCH INSTITUTE  
(ICAR)  
P. B. No. 1912, COCHIN-692 018, INDIA

The Central Marine Fisheries Research Institute has been furnishing information on marine fish catch statistics in the country for the past three decades. The NATIONAL MARINE LIVING RESOURCES DATA CENTRE (NMLRDC) functioning at this Institute is acquiring, processing, analysing and storing data on marine fish landings, as well as biological, environmental and socio-economic aspects and disseminating information on the marine living resources and related aspects to the user sectors. This book contains a list of common marine living resources of the EEZ of India with allotted codes for enabling collection of detailed specieswise data and for facilitating computerisation. This will go a long way in achieving the objectives of NMLRDC.

## P R E F A C E

The Central Marine Fisheries Research Institute has been estimating marine fish landings along the Indian Coast for the past three decades and the data are being furnished to Central and State Governments, Industry, and national and international agencies. The Institute is also involved with the assessment of our marine fishery resources and management of multispecies harvested by diverse fishing gears. In the years to come, our commercially utilised marine animal and plant resources may cover not only conventional fin-and shell-fishes, but also non-conventional groups, such as mesopelagics, sponges, corals and seaweeds. There are endangered groups, such as marine mammals and turtles, which are protected under Wildlife Act. They occur as incidental catches or are occasionally stranded and these need monitoring.

The National Marine Living Resources Data Centre (NMLRDC) at CMFRI was established with the object of facilitating the acquisition and handling of voluminous data, collected by the Institute, other fishery agencies and the industry, for rapid processing and dissemination to the end users. As this involves furnishing of data relating to a large variety of our marine fishery resources, it has become necessary to computerise the processing of data.

The Planning Commission has suggested that computerisation programme for acquisition and rapid dissemination of data at CMFRI Data Centre should be expedited. The National Workshop on "Acquisition and Dissemination of Data on Marine Living Resources of Indian Seas", held at Cochin from 21st to 23rd October 1982, recommended that CMFRI be provided with an electronic computing system for

the above purpose. A prerequisite for this is codification and acquisition of specieswise data for commercially important varieties presently being exploited, as well as some of the species potentially important. In order to facilitate this, code numbers have been given for genera and species with adequate provision for future addition of potentially important species from the Indian Seas. Common names are given against species/genus. As regards fish, the various genera and species have been listed under different families as given by Berg (1940). The Scientific and common names of fishes have been mostly taken from FAO Species Identification Sheets for the Eastern Indian Ocean and Western Central Pacific (Fishing areas 57 & 71, 1974), Munro (1955), Smith (1961) and Jones and Kumaran (1980). For other marine groups also, latest nomenclature and common names, to the extent possible, have been given.

In Index I, the genera and species which have been codified, are arranged in alphabetical order to enable the user to locate easily the species and their code numbers. In Index II, the groups are given in alphabetical order.

This code book is hoped to be of help to our scientific and technical staff as well as other agencies in the collection of field data in a uniform pattern to feed the NMLRDC at CMFRI and also to help the Centre in speedily disseminating information. The users of this code book are requested to bring to my notice if there are any corrections or omissions of commonly occurring species for incorporating the same in the subsequent editions.

I wish to express my sincere thanks to Shri G. Venkataraman, Shri P. K. Mahadevan Pillai and Shri Joseph Andrews and other scientific and technical staff belonging to the various divisions of this Institute for the special efforts they have taken to prepare and scrutinise the list of different groups. I am thankful to Shri T. Jacob for his valuable suggestions regarding the code format.

My special thanks are due to Shri M. Kumaran, Scientist of this Institute, who took pains to go through the list of fishes critically with particular reference to species and common names. I am grateful to Dr. Leonard J.V. Compagno,

**Tiburon Centre for Environmental Studies, San Francisco State University for going through the list of sharks and giving valuable suggestions. I wish to record my sincere thanks to Shri K. N. Krishna Kartha and Shri S. K. Dharma Raja, Scientists of CMFRI for critically going through the proofs and Shri K. Rengarajan, Scientist and Shri K. L. Kesavan, Artist for help in the preparation of cover design for this book.**
