

CMFRI SPECIAL PUBLICATION

Number 7

**MANUAL OF RESEARCH METHODS FOR
CRUSTACEAN BIOCHEMISTRY AND PHYSIOLOGY**

Issued on the occasion of the **Workshop on
CRUSTACEAN BIOCHEMISTRY AND PHYSIOLOGY**
jointly organised by
the **Department of Zoology, University of Madras** and
the **Centre of Advanced Studies in Mariculture,
Central Marine Fisheries Research Institute,**
held at Madras from 8 - 20 June 1981

CMFRI SPECIAL PUBLICATION

**MANUAL OF RESEARCH METHODS FOR
CRUSTACEAN BIOCHEMISTRY AND PHYSIOLOGY**

Issued in the form of a Special Workshop on
CRUSTACEAN BIOCHEMISTRY AND PHYSIOLOGY
jointly organized by
the Department of Zoology, University of Madras and
the Centre of Advanced Studies in Mariculture,
Central Marine Fisheries Research Institute,
held at Madras from 8 - 20 June 1981

Manual of Research Methods for Crustacean Biochemistry and Physiology

EDITED BY

M. H. RAVINDRANATH

CMFRI SPECIAL PUBLICATION

Number 7

ISSUED ON THE OCCASION OF THE WORKSHOP ON CRUSTACEAN
BIOCHEMISTRY AND PHYSIOLOGY JOINTLY ORGANISED BY THE
DEPARTMENT OF ZOOLOGY, UNIVERSITY OF MADRAS AND THE
CENTRE OF ADVANCED STUDIES IN MARINE FISHERIES, CENTRAL
MARINE FISHERIES RESEARCH INSTITUTE HELD AT MADRAS FROM
8-20 JUNE, 1981.

22.1 PAIRED SAMPLE 't' TEST

In 't' test for mean difference, the significance of a difference between 2 sample mean is tested. Under certain conditions 2 sets of sample values may be related to one another. Such paired data may be tested to see if the mean difference between the pair is significant by different from zero.

$$\text{i.e. } t = \frac{\text{mean difference between the pairs}}{\text{standard error of the mean difference}}$$

$$\begin{array}{ll} 1. x_1 - x_2 = y & 2. \sum y \\ 3. (\sum y)^2 & 4. \sum y^2 \\ 5. \frac{\sum y^2 - \frac{(\sum y)^2}{n}}{n - 1} = S_y \end{array}$$

$$\therefore t = \frac{\bar{y}}{S_y}$$

22.2. 't' TEST FOR MEAN DIFFERENCE

Whether the means of two normally distributed samples are significantly different at a particular level of probability or not may be tested with the following prerequisites.

1. Means of two samples (\bar{x}_1, \bar{x}_2), their differences, $\bar{x}_1 - \bar{x}_2$.
2. Variance (s_1^2, s_2^2) of two samples i.e.

$$\frac{\sum x_1^2 - \frac{(\sum x_1)^2}{n_1}}{n_1 - 1} = s_1^2; \quad \frac{\sum x_2^2 - \frac{(\sum x_2)^2}{n_2}}{n_2 - 1} = s_2^2$$

* Prepared by M. Arumugam, School of Pathobiology, Department of Zoology, University of Madras, Madras-600 005.

3. The variance of means $\frac{s_1^2}{n}$, $\frac{s_2^2}{n}$ and
4. The variance of the difference between the two means 1 & 2 (sum of the variances of the samples).
5. Calculating standard error of the difference between the variances of the means $\frac{s_1^2}{n} + \frac{s_2^2}{n}$
6. 't' is the ratio of the differences between the means and the standard error of difference between the variances of the means.

$$t = \frac{\bar{x}_1 - \bar{x}_2}{\sqrt{\frac{s_1^2}{n_1} + \frac{s_2^2}{n_2}}}$$
