FOREWORD

The Reference collections of the Central Marine Fisheries Research Institute at Mandapam Camp have steadily grown in the past two decades since its inception. Although it was originally intended to have these collections primarily with a view to representing economically important groups from the marine habitats, in recent years, with a number of Research Scholars specializing in varied zoological groups out of taxonomic and academic interests, the collections of the Institute have increased substantially.

In the present Bulletin are listed 46 Type species representing different phyla, 152 species of sponges, 160 species of corals, 200 species of crabs and hermit-crabs and 185 species of echinoderms. Some of the species listed are new records from the seas around India or even from the Indian Ocean as reported by the research workers of this institute. For types, references are given followed by type category, registered number, locality and other particulars. For reference collections the name of the species is followed by registered number and localities of occurrence.

It may be mentioned here that almost the entire collection of corals and sponges listed here have been made by Dr. C.S. Gopinadha pillai and Mr. P. A. Thomas, as Research Scholars specializing in the respective groups. Polychaete collections were made in the initial stages by Mr.K. Rengarajan, but substantial additions have been made in the recent few years by Mr.G. P. Kumaraswamy Achary. Dr. C. Sankarankutty who worked at this Institute on the brachyuran and anomuran decapod crustacea collected and deposited considerable number of specimens representing the groups and Mr. M.M. Thomas currently added a good number to them. The echinoderm group in a similar way represented by collections from Indian coasts including the Laccadive Archipelago and the Andaman Nicobar group of Islands is mostly made by Mr. D.B. James who has taken this group for detailed study. This collection has been enriched by a number of specimens from coasts other than Indian through the courtesy and co-operation of scientific workers interested in the group elsewhere.

It gives me immense pleasure to place on record my appreciation to all concerned and particularly to Dr.P.S.B.R. James, Dr.C.S. Gopinadha Pillai, Messrs. P.A. Thomas, G.P. Kumaraswamy Achari, M.M. Thomas and D.B. James for the maintenance and cataloguing of the reference collections listed in this Bulletin. It is contemplated that similar catalogues be issued on other groups also in the near future. Such carefully catalogued collections steadily augmented by future workers, it is hoped, will serve to guide those interested and facilitate investigations in the respective fields.
