The Central Marine Fisheries Research Institute's (CMFRI) seed production technology for giant trevally (Vatta) has been selected among the country's top five innovations in fisheries by the Indian Council of Agricultural Research (ICAR), according to the Institute.

The technology was offi-

cially released by Union Agriculture Minister Shivaraj Singh Chouhan during the 97th Foundation Day celebrations of ICAR in New Delhi, said a press-communication issued here.

CMFRI Director Grinson George hoped that the technology would significantly boost the production of the commercially important fish, the press-note said.
