

# ‘Gene expression pattern of Indian squid decoded’

**The Hindu Bureau**

KOCHI

Researchers at the Central Marine Fisheries Research Institute, Kochi, claimed to have decoded the gene expression pattern of Indian squid (*Uroteuthis duvaucelii*).

The research programme was conducted by a team led by Sandhya Su-

kumaran, principal scientist at the Marine Biotechnology, Fish Nutrition and Health Division of the institute, according to a communication.

The study on the gene expression profiles of the species revealed its genetic similarities with higher vertebrates such as fish and humans suggesting evolutionary connections.
