5th Marine Fisheries Census 2025

"Smart Census, Smarter Fisheries"

The National Marine Fisheries Census 2025, aimed at the comprehensive development of our marine fisheries sector, is being conducted from November 3 to December 18 in all the coastal states of India and Union Territories, including Lakshadweep and Andaman & Nicobar Islands.

On behalf of the Ministry of Fisheries, Animal husbandry and Dairying, this massive data collection project, covering over 1.2 million fisherfolk families residing in about four thousand coastal villages of India, is being implemented by the ICAR-Central Marine Fisheries Research Institute (CMFRI). The Fishery Survey of India (FSI) is also a partner in this exercise.

For this purpose, authorized enumerators who have received official training will visit your homes during this period to collect data using a mobile app developed by CMFRI.

We sincerely request all our fisherfolk friends, working directly and indirectly in this sector, to become active partners in this nationwide Marine Fisheries Census 2025 by providing valuable information and contribute to the nation's progress focused on the marine sector.

Cooperate!

Be a part of the national development!
