Preface to First Edition

The Central Marine Fisheries Research Institute has been estimating marine fish landings along the Indian coasts for the past three decades and the data are being furnished to Central and State Governments, industry and national and international agencies. The Institute is also involved with the assessment of our marine fishery resources and management of multispecies harvested by diverse fishing gears. In the years to come, our *commercially utilised marine animal and plant resources* may cover not only conventional fin and shell fishes, but also non-conventional groups, such as mesopelagics, sponges, corals and sea weeds. There are endangered groups, such as marine mammals and turtles, which are protected under the Wildlife Act. They occur as incidental catches or are 'occasionally stranded' and these need monitoring.

The National Marine Living Resources Data Centre (NMLRDC) at CMFRI was established with the object of facilitating the acquisition and handling of voluminous data, collected by the Institute, other fishery agencies and the industry, for rapid processing and dissemination to the end users. As this involves furnishing of data relating to a large variety of our fishery resources, it has become necessary to computerise the processing of data.

The Planning Commission has suggested that computerisation programme for acquisition and rapid dissemination of data at CMFRI Data Centre should be expedited. The National Workshop on "Acquisition and Dissemination of Data on Marine Living Resources of Indian Seas", held at Cochin from 21st to 23rd October 1982, recommended that CMFRI be provided with an electronic computing system for the above purpose. A prerequisite for this is codification and acquisition

of specieswise data for commercially important varieties presently being exploited, as well as some of the species potentially important. In order to facilitate this, code numbers have been given for genera and species with adequate provision for future addition of potentially important species from the Indian seas. Common names are given against species/genus. As regards fish, the various genera and species have been listed under different families as given by Berg (1940). The scientific and common names of fishes have been mostly taken from FAO Species Identification Sheets for the Eastern Indian Ocean and Western Central Pacific (Fishing areas 57 & 71, 1974), Munro (1955), Smith (1961) and Jones and Kumaran (1980). For other marine groups also latest nomenclature and common names, to the extent possible, have been given.

In Index I, the genera and species which have been codified, are arranged in alphabetical order to enable the user to locate easily the species and their code numbers. In Index II, the groups are given in alphabetical order.

This code book is hoped to be of help to our scientific and technical staff as well as other agencies in the collection of field data in a uniform pattern to feed the NMLRDC at CMFRI and also to help the Centre in speedily disseminating information.

I wish to express my sincere thanks to Shri. G. Venkataraman, Shri P. K. Mahadevan Pillai and Shri Joseph Andrews, and other scientific and technical staff belonging to the various divisions of this Institute for the special efforts they have taken to prepare and scrutinise the list of different groups. I am thankful to Shri T. Jacob for his valuable suggestions regarding the code format.

My special thanks are due to Shri M. Kumaran,

Scientist of this Institute, who took pains to go through the list of fishes critically with particular reference to species and common names. I am grateful to Dr. Leonard J.V. Compagno, Tiburon Centre for Environmental Studies, San Francisco State University for going through the list of sharks and giving valuable suggestions.

Preface to Revised Edition

The Central Marine Fisheries Research Institute, Cochin is the pioneer national establishment primarily engaged in marine fisheries research in the country. As a programme of dissemination of information the Institute published a code list of common marine living resources of the Indian seas in 1983. However, considerable changes have since occurred in the nomenclature of many of the genera, families and species of fishes. Hence it is felt that there is an urgent need to revise the code list incorporating these changes. The present publication is a result of this exercise.

While listing the species, meticulous care has been taken to follow international standards. Wherever necessary, synonyms are provided in parentheses.

I wish to congratulate Mr P.K. Mahadevan Pillai and Ms. Sindhu K. Augustine for venturing into this hard task and accomplishing it in a short time. It is expected that this volume will be useful to the research workers and students as a valuable reference.
